

Electronic Data Interchange (EDI) Gateway

Harness your data to drive value

The Edifecs EDI Gateway allows healthcare organizations to manage their data from a single solution to reduce operation costs and improve service. By providing insights into key data issues, our fully managed solution helps organizations work more effectively with external and internal trading partners and improve the quality of the data they exchange.

Significantly decrease costs associated with managing changes to program code sets and guidelines

Reduce manual workflows with automated monitoring and integrated transaction correction capabilities

Limit audit exposure with searchable and HIPAA-compliant records of current and archived transactions

Improve first-pass rates with the same EDI validation and integration engine used in CMS' Administrative Simplification Enforcement and Testing Tool (ASETT)

Streamline troubleshooting and issue detection with self-service access for staff and partners

Achieve more reliable and scalable data exchange with Edifecs' hybrid SaaS environment

HEALTHCARE TRANSACTIONS

HIPAA, X12N

Batch, Real Time: Enrollments (834), Claims, Encounters (837 I/P/D), Payments (835, 820)

Responses (824, 277CA), Acks (999/TA1)

CORE OR

Phase I/II (270/271), Phase III (EFT/ERA), Phase IV (837), Phase V (278)

Responses (271, 277, 835), Acks (999/TA1)

ATTACHMENTS

Solicited, Un-Solicited: Electronic Attachments (275), Claim Status (277), Prior Authorization (278)

Responses (277 RFAI, 275), Acks (824, 999/TA1)

NCPDP

Rx Claims, Encounters, NCPDP

Acks (ARM, 999/TA1)

CLINICAL

MLLP, APIs (IHE, DIRECT, FHIR): HL7 2.x, 3.x, CDA, support for Patient Access API, Payer to Payer, NSA, etc

CUSTOM

SOAP, WSDL, REST, Proprietary, XML, JSON, CSV, PDF

Key Capabilities and Features

What We Solve	How We Do It
Improve efficiency of business processes and IT operations	• Automate alerts to trigger when processing exceptions occur • Configure workflow and escalations to correct transactions before transmission • Access archived data quickly and easily to support discovery, claim, adjudication and audit
Monitor performance against internal and external SLAs	• Identify trends with in-depth reporting by partner and transaction type • Ensure data received equals data processed with balancing reports • Track SLAs (e.g., turnaround times on claims and requests) and receive alerts when SLA exceptions occur
Work more effectively with trading partners	• Provide business-friendly insights for consumption by non-EDI staff • Support performance management with partner/channel activity trends • Engage with more potential trading partners with support for non-standard transaction exchanges
Improve claims first-pass rates and enrollment processing	• Ensure consistent data quality across all systems with custom edit creation capabilities • Determine the root cause of claim rejections and take swift action to correct transactions • More effectively manage trading partners with reporting on key metrics (e.g., errors by type and partner)
Lower service costs and improve customer experience	• Leverage powerful search functionality to reduce the need for service experts • View transaction processing flow and events in multiple formats • Secure transactions and views with role-based control

Why Cotiviti

Ready to maximize the quality and value of your data? To learn more about the EDI Gateway, visit Cotiviti.com

30+ Years of Proven partnership

88% of US lives processed via Cotiviti EDI platform

70% of state Medicaid programs
